Material

Mild steel

We are not producing an industrial product, to keep the product cost efficient we chose to use mild steel as the material, which gives us a decent strength.

This will give us a bearing/lifting strength of about 200 kg.

ITEM	QTY	PART NUMBER
1	1	Base Stand
2	1	Lower Left Arm
3	1	Lower Right Arm
4	2	Lower Rivet
5	1	Lift Plate
6	1	Upper Left Arm
7	1	Upper Right Arm
8	2	Upper Rivet
9	1	Screw Assembly
10	1	Nut

Scissors Jack - Creating the Base

Bar length: 200mm each

Square thread:

Length: 508mm

Diameter: 19mm

Base

length: 150mm

width: 80mm

Top

length: 100mm

width: 60mm

METHODS FOR MAKING SCREW JACK

- **CUTTING**

Cutting the raw materials, such as steel bars, threaded rod or handle into the required lengths.

2. DRILLING

In a scissor jack, we are going to drill holes in the arms or links to accommodate pins, axles .

3. TURNING

It will be better if we can buy the threaded rod or, we will use lathe machine to make the threaded rod.

4. WELDING

In scissor screw jacks, the links or arms that form the scissor mechanism will be connected to pivot points using welding. Welded joints provide stability and strength to these critical components.

5. ASSEMBLY

After completing all the processes like cutting, turning, drilling, welding , all the parts are ready to assemble together.

6. FINISHING

After successfully assemble, we will paint or coat the screw jack to protect the scissor jack from corrosion, extending its lifespan, and ensuring its durability.

Survey

Mild steel to be purchased: 5 Kg.

cost: 95-110/ kg.

total: rs 475-550.

Screw thread: rs 280-350.

If screw thread is not purchased then we may make the same my turning operation.
